New Hampshire Geological Survey Interactive Publication Viewer

This interactive viewer displays the current availability of surficial and bedrock geologic publications for the state of New Hampshire, published for or by the New Hampshire Geological Survey (NHGS). Publication availability varies by location and map scale. This viewer allows users to search and download maps and applicable companion documents. This information is subject to change as new publications become available.

Please note that this viewer does not contain all of the available geologic records managed by NHGS. Additional historic, cultural, and educational publications may be obtained through the NHDES Publication Viewer or by contacting our office directly.

For instructions on the use of this viewer, please see the **How to Use** panel to the left of the map. This will be visible after closing this screen.
