

DIGITAL MAPPING TECHNIQUES 2017

The following was presented at DMT'17
(May 21-24, 2017 - Minnesota Geological
Survey, Minneapolis, MN)

The contents of this document are provisional

Open Source Software for Niche GIS Solutions

Seth Willis Bassett, GISP
Florida Geological Survey
3000 Commonwealth Blvd,
Suite 1
Tallahassee, FL 32303
Telephone: (850)-617-0300
Email: Seth.Bassett@dep.state.fl.us

Presentation Summary

The genesis of this presentation was a request by David Soller of the USGS that I give a presentation on some Free and Open Source Software (FOSS) solutions for niche GIS applications. The idea was that ESRI software suffices for most routine GIS work encountered in the geologic sciences, but occasionally a project will require a solution that offers more power, customization, or flexibility than ESRI's software suite provides to the user. This is not to take away from the value of ESRI's software, or the amazing things they have done in the world of GIS; generally speaking, if you need a solution to a GIS problem, ESRI has an application, framework, or piece of software that will work 'off the shelf.' Dave knew that I have a depth of experience working with FOSS GIS tools, so he asked that I give a second presentation at DMT 2017 that provided an overview of some niche FOSS software solutions I have encountered in my time at the Florida Geological Survey.

For the most part, this presentation is self-explanatory and self-contained. Each slide, beginning at slide 15, identifies a piece of FOSS software, the niche application it is suited for, the difficulty of using the software on a scale of 1-5 stars, and a review of 'the good, the bad, and the ugly' for each piece of software from the user's perspective. Rather than replicate that information in this summary document, I have instead provided links to the homepage of each piece of software discussed in the presentation, current at the time of writing (July 10, 2017).

Slide Summary

- Slide 2: A "map" of the ESRI software application suite
- Slide 3: How do we think of GIS? Is it a "map" where a single piece of software or a single method encompasses every possible solution we might need? Or is it a 'toolbox' where we pick up tools as we need them, and lay them aside after we are done? A major thesis to this presentation is that GIS software is a tool, and each piece of software should be treated as such: picked up when it is needed, and put aside when it is not.
- Slide 4: By which I mean the role I fill at the Florida Geological Survey is somewhere between Research & Development and GIS troubleshooter. In the course of my workday, I am typically given a task when no one has any idea how to complete it. This leads to a particular workstyle where I develop a solution for single-use application to the data for a single project. After the task is done, I then typically abandon the solution and move one to the next project and set of problems. Much like Jackson Pollock treats a canvass, I tend to use GIS as a paintbrush and sling

ideas at a map to see what patterns emerge. What I do *not* typically do is support long-term projects and write code in a production environment; this is an important caveat and the differences between what I do and developing a production GIS product are critical, because I do not typically become involved in projects where long-term stability and support are necessary.

- Slide 5: Basic licensing terminology you will commonly hear in open source software
- Slide 6: Example of a typical closed source license – the ArcGIS license.
- Slide 7 & 8: Example of "things in the EULA you never knew you agreed to" from the Teleatlas Streetmap Premium license
- Slide 9: Example of a FOSS license
- Slides 10-13: The list of open source software components used in ArcGIS
- Slide 14: How to identify good and bad open source software projects
- Slides 15-19: QGIS
 - <http://www.qgis.org/en/site/>
- Slide 20: The qgis2threejs plugin
 - <https://github.com/minorua/Qgis2threejs>
- Slide 21: GDAL
 - <http://www.gdal.org/>
- Slides 24-29: PostGIS
 - <http://postgis.net/>
- Slides 30-35: scikit-image and scikit-learn
 - <http://scikit-image.org/>
 - <http://scikit-learn.org/stable/>
- Slides 36-38: Geoserver
 - <http://geoserver.org/>

Open Source Software for Niche GIS Solutions

Seth Willis Bassett, GISP

ESRI is amazing, full stop!

Symphony of ArcGIS Apps

What is our mental model of GIS software?

Is it a "map" or a "toolbox?"

Disclaimer

I am the Jackson Pollock of GIS.

Basic Terminology

- **Closed Source Software**
 - End-User License Agreement (EULA)
- **Open Source Software**
 - Copyleft Open Source Software
 - Gnu Public License (GPL)
 - **Free & Open Source Software (FOSS)**
 - BSD License
 - MIT License
 - Apache License
 - PostgreSQL License
- **Long Term Service (LTS)**

Closed Source:

ArcGIS EULA

ARTICLE 2

- Products are licensed, not sold. Esri and its licensors own Products and all copies...

ARTICLE 4.2: Uses Not Permitted

- e. Reverse engineer, decompile, or disassemble Products;
- j. Incorporate any portion of the Product into a product or service that competes with the product.
- l. Use, incorporate, modify, distribute, provide access to, or combine any computer code provided with any Product in a manner that would subject such code or any part of the Product to open source license terms.

- C:\Program Files (x86)\ArcGIS\Desktop10.2\License\EULA.pdf

Closed Source:

Teleatlas Streetmap Premium EULA

5. If Licensee is an agency, department, or other entity of any State government, the United States Government, or any other public entity, or funded in whole or in part by the United States Government, then Licensee hereby agrees to protect the Data from public disclosure and to consider the Data exempt from any statute, law, regulation, or code, including any Sunshine Act, Public Records Act, Freedom of Information Act, or equivalent, which permits public access and/or reproduction or use of the Data. In the event that such exemption is challenged under any such laws, this agreement shall be considered breached and any and all right to retain any copies or to use of the Data shall be terminated and considered immediately null and void. Any copies of the Data held by Licensee shall immediately be destroyed. If any court of competent jurisdiction considers this clause void and unenforceable, in whole or in part, for any reason, this agreement shall be considered terminated and null and void, in its entirety, and any and all copies of the Data shall immediately be destroyed.

UPDATED APRIL 2013

Q: "Why should I use open source GIS?"

A: "You already are."

Picking Winners & Losers in the World of FOSS

Winning Characteristics

- Mature
- Large user base
- Professional(ish) management practices
 - Dedicated development team
 - Long term service (LTS) release model
 - Active & ongoing development
- Corporate use & sponsorship
- *Tip: pick "-1" year LTS for production*

Losing Characteristics

- "Some guy's github"
- Projects with a nice webpage but no active community
- Corporate "Open Source" projects

QGIS

"Oh yeah, that thing"

QGIS: All Purpose GIS Suite

Difficulty: ★

Benchmarks

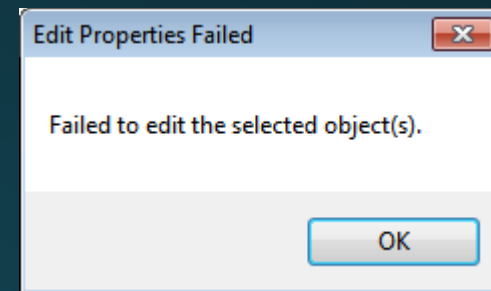

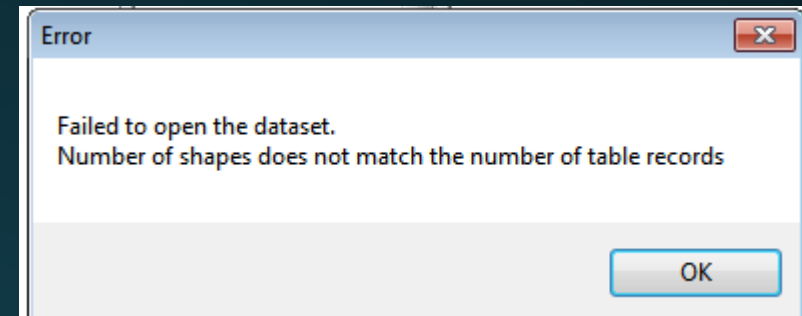

- The Good
 - FOSS GIS Suite
 - Full Featured GUI Interface
 - Numerous plugins extend functionality (ESRI take note!)
 - Direct Connection to PostGIS supports multi-user, transactional editing
 - WFS-T based editing is supported
 - Native multi-core rendering
 - LTS Version for businesses
- The Ugly
 - Map Composer is alien at best, absolute garbage at worst
 - ESRI has intentionally crippled the OpenGDB API, so using file geodatabases can be problematic
 - Bugs, although not as many as ArcGIS in my experience.

QGIS: *Shapefile Repair*

Difficulty: ★

- Open shapefile in QGIS
- "Save As..." another shapefile
- Problem Solved!

For Instance....

QGIS:

LIDAR Derived Raster Analysis

Difficulty: ★

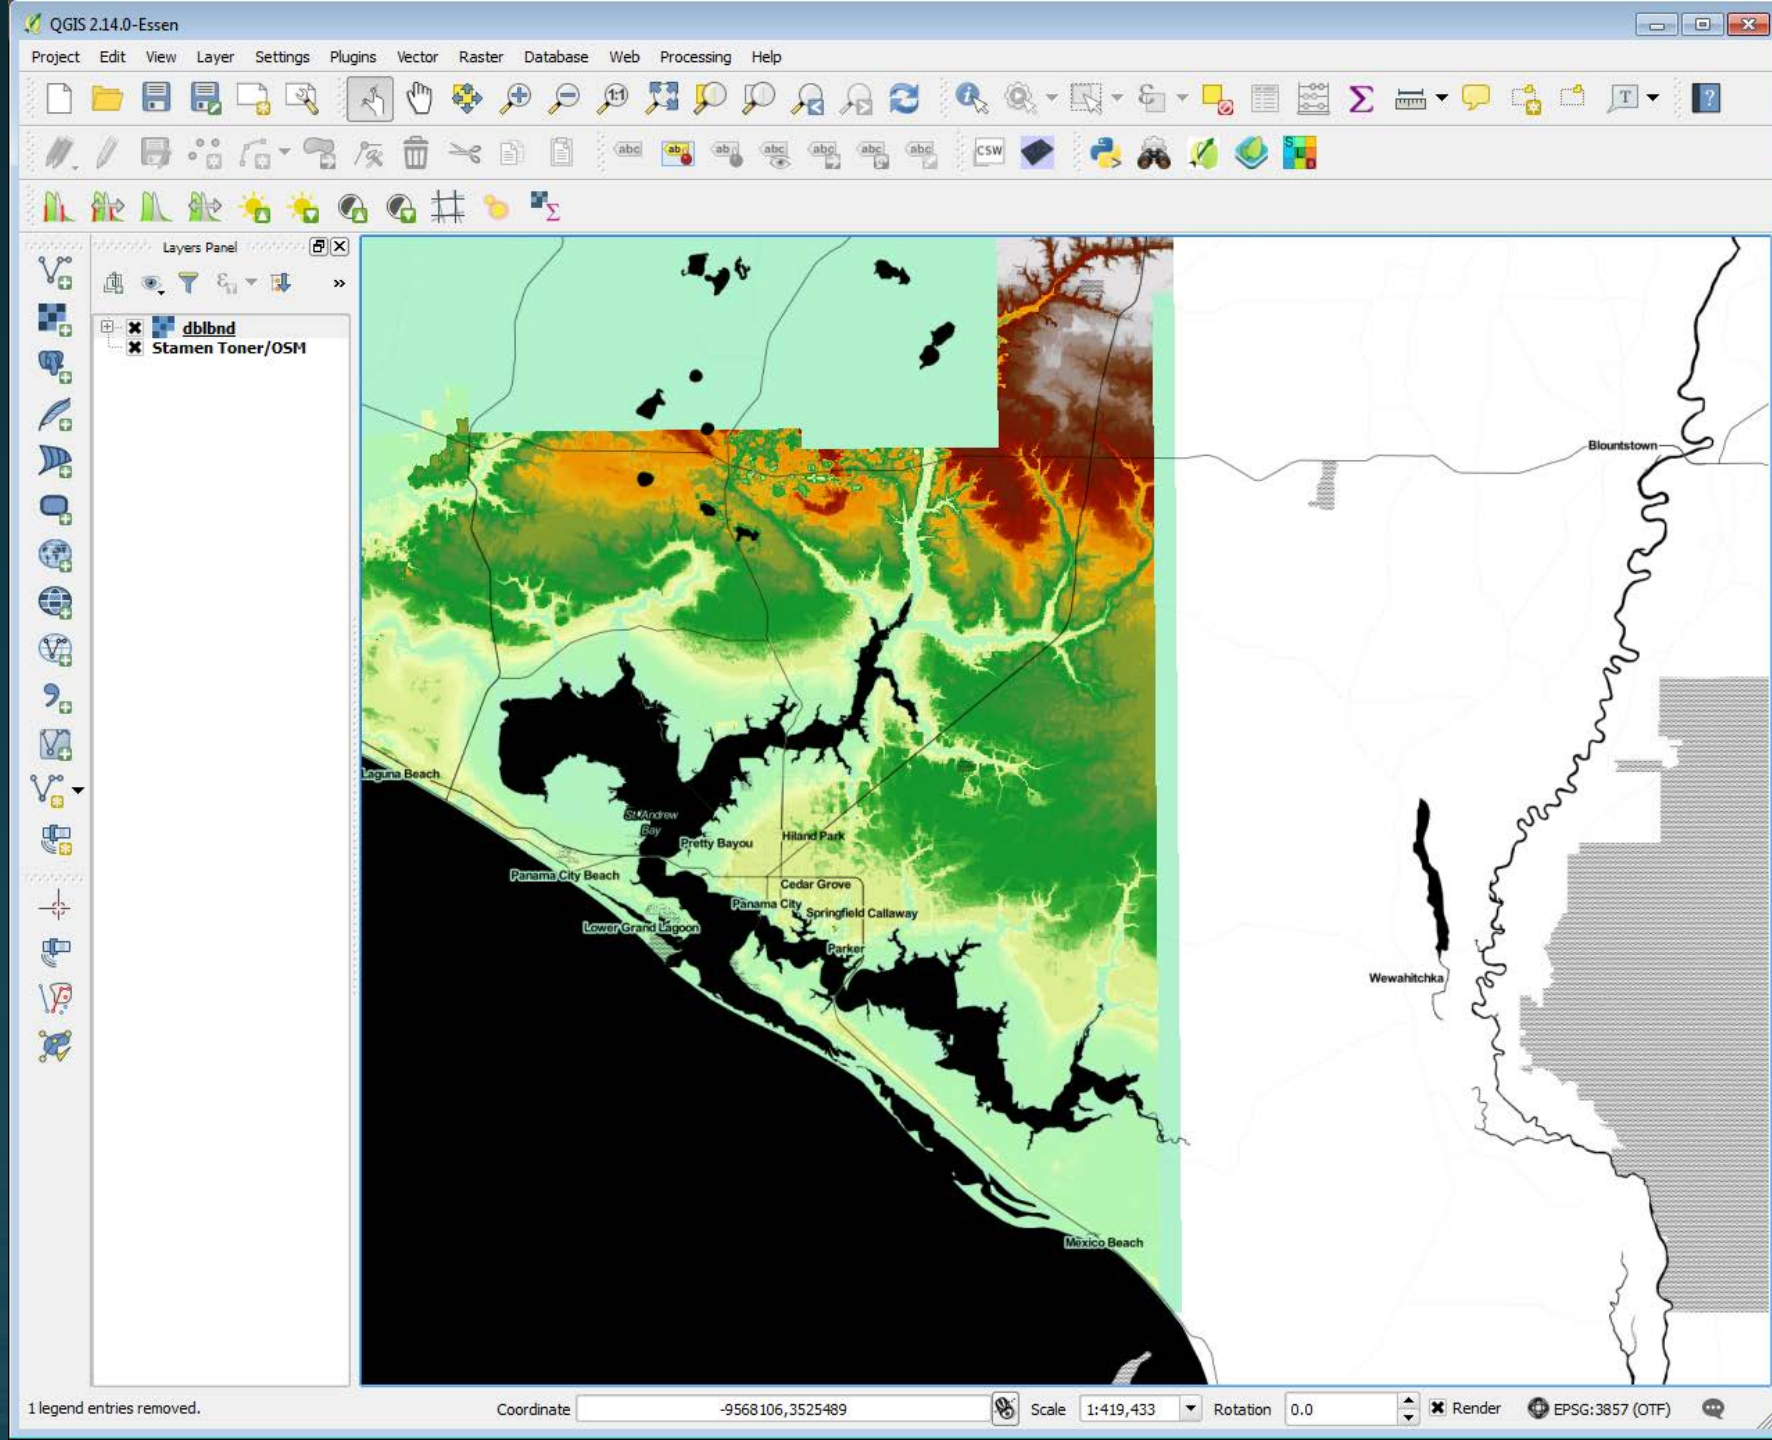

- Faster at rendering data on screen due to multi-core rendering support
- (Generally) faster at generating terrain analysis rasters
- Wealth of overlay options for rasters

Benchmarks

Software	ArcGIS 10.2	QGIS 2.1
File	Wakulla County Lidar	Wakulla County Lidar
Type	.tif -> .tif	.tif -> .tif
Hillshade	3m 53s	3m 30s
Slope	3m 31s	1m 27s
Aspect	2m 1s	2m 39s

*Benchmarks run on the same machine, with GIS software as the only open application

“Multiply” allows you to blend a LIDAR terrain file and the Stamen Toner Basemap service

QGIS:

Web Ready, Browser Native 3-D Content

Difficulty: ★

- Qgis2threejs plugin creates web-ready, 3D content that runs natively in a web browser
- Can be used with existing data
- Overlay options provide nice solutions for creating compelling 3D maps
- Layer controls
- Content can be queried

Examples

- [FGS Bulletin 68 Surfaces](#)
- [FGS Bulletin 68 Surfaces + Boreholes](#)

gdal

“Blazing fast batch processing”

gdal:

Command Line Batch Processing

Difficulty: ★ ★

- The Good
 - Native C/Python bindings for blazing fast performance
 - [Raster Processing Utilities](#)
 - [Vector Processing Utilities](#)
- The Ugly
 - Command line interface using flags
 - Every utility is different

gdal: Examples

An 8-bit SPOT scene stored in GeoTIFF with control points mapping the corners to lat/long could be warped to a UTM projection with a command like this:

```
gdalwarp -t_srs '+proj=utm +zone=11 +datum=WGS84' -overwrite raw_spot.tif utm11.tif
```

Create 10m contours from the DEM data in dem.tif and produce a shapefile in contour.shp/shx/dbf with the contour elevations in the "elev" attribute.

```
gdal_contour -a elev dem.tif contour.shp -i 10.0
```

PostGIS

"That's a lot of polygons"

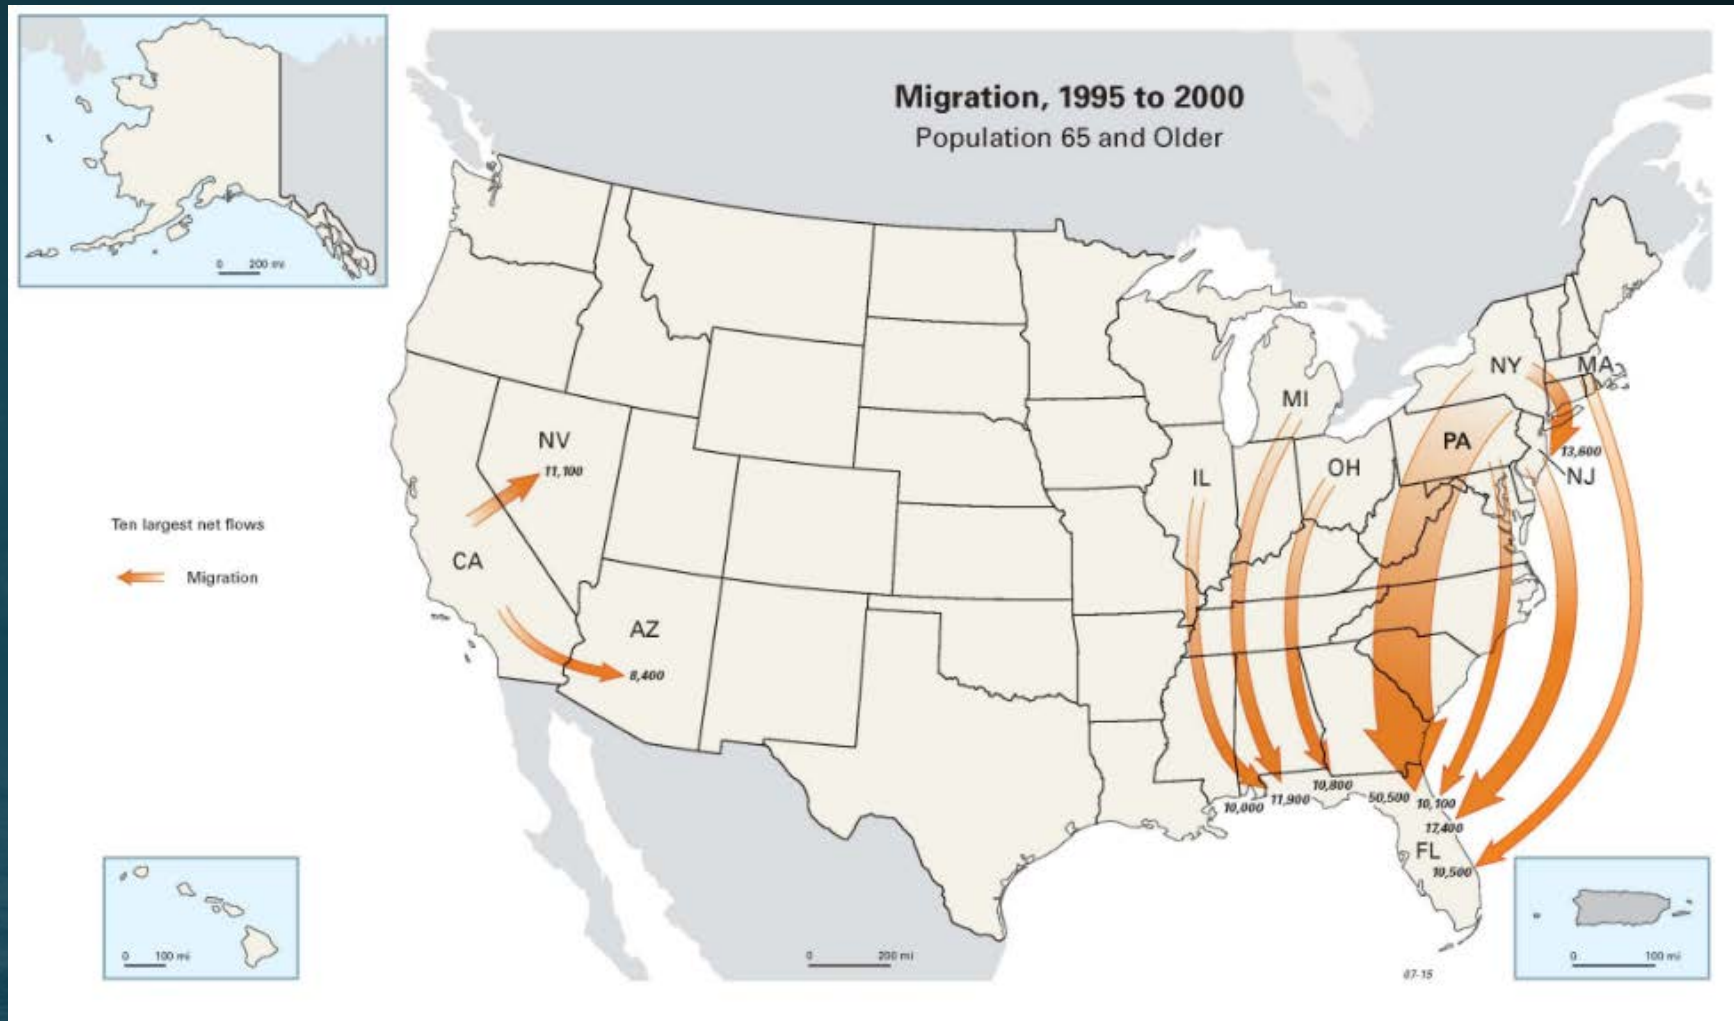

PostgreSQL/PostGIS:

Enterprise Geospatial RDBMS for Big Vector Analysis

Difficulty: ★★ ★

- The Great
 - It's not Oracle!
- The Good
 - Tons of Functions
 - Cross Platform
 - pgAdmin III GUI or command line
 - Blazing Fast on old hardware
 - Direct integration w/ QGIS
 - Command line tools to import shapefile and raster data
 - Structure will be familiar to GDB users
 - Excellent documentation
- The Ugly
 - "Enterprise" level software solution
 - Requires mid-level proficiency in SQL to get started
 - Learning the ST() function suite takes time
 - Poor/buggy ArcGIS integration

Who owns Florida?

PostGIS: Big Vector Analysis

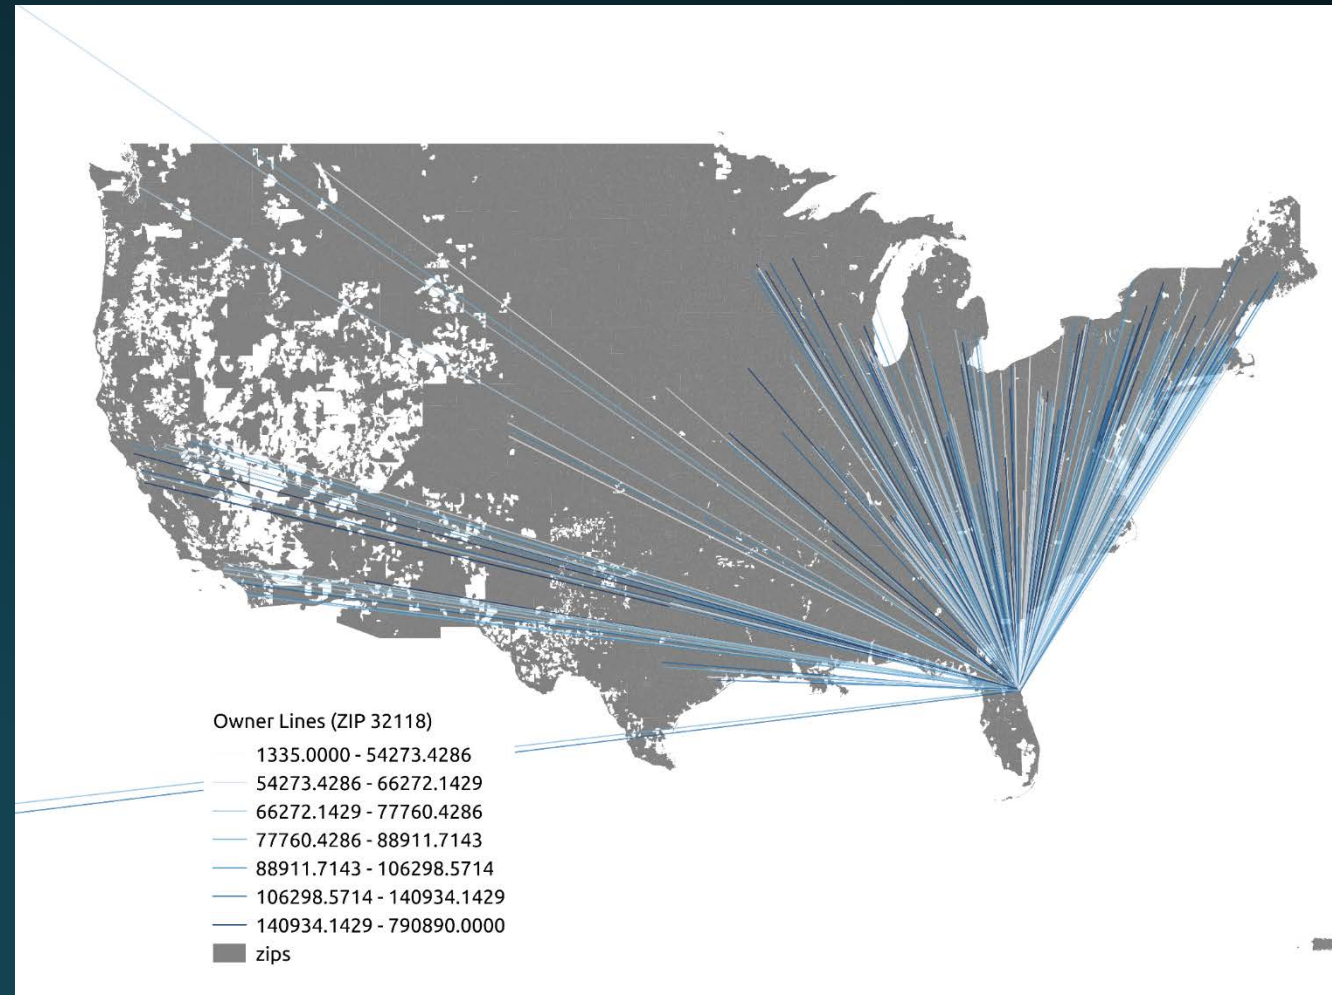

- Calculate 9,008,470 million parcel centroids
- Calculate ZIP centroids
- Exclude owner's ZIP where owner's ZIP intersects Florida and any property that is not residential
- Use ST_Makeline() to connect every parcel to the owner's ZIP centroid

```
1 --add a new geometry column
2 SELECT AddGeometryColumn('public','cpoly','geomcon',3395,'MULTIPOLYGON',2);
3
4 --reproject
5 UPDATE cpoly SET geomcon = (SELECT ST_Transform(geom, 3395));
6
7 --reduce to centroids
8 SELECT AddGeometryColumn('public','cpoly','geomcents',3395,'POINT',2);
9 UPDATE cpoly SET geomcents = ST_Centroid(geomcon);
```

```
1 CREATE TABLE analysis.zagg_nofl_res AS
2 SELECT C.own_zipcd,
3        COUNT(C.own_zipcd) count_owners,
4        SUM(C.jv) sum_jv,
5        AVG(C.jv) avg_jv,
6        SUM(C.lnd_sqfoot) sum_sqfoot,
7        AVG(C.lnd_sqfoot) avg_sqfoot,
8        Z.geomcon newgeom
9 FROM cpoly AS C
10 INNER JOIN zips AS Z
11 ON C.own_zipcd = Z.zint
12 WHERE own_zipcd IS NOT NULL
13 AND public_lnd IS NULL
14 AND own_state NOT ILIKE 'FL'
15 AND own_state NOT ILIKE 'FLORIDA'

Volusia County Parcel Ownership Vectors

Scaled by Average Appraised Tax Value per Zip Code

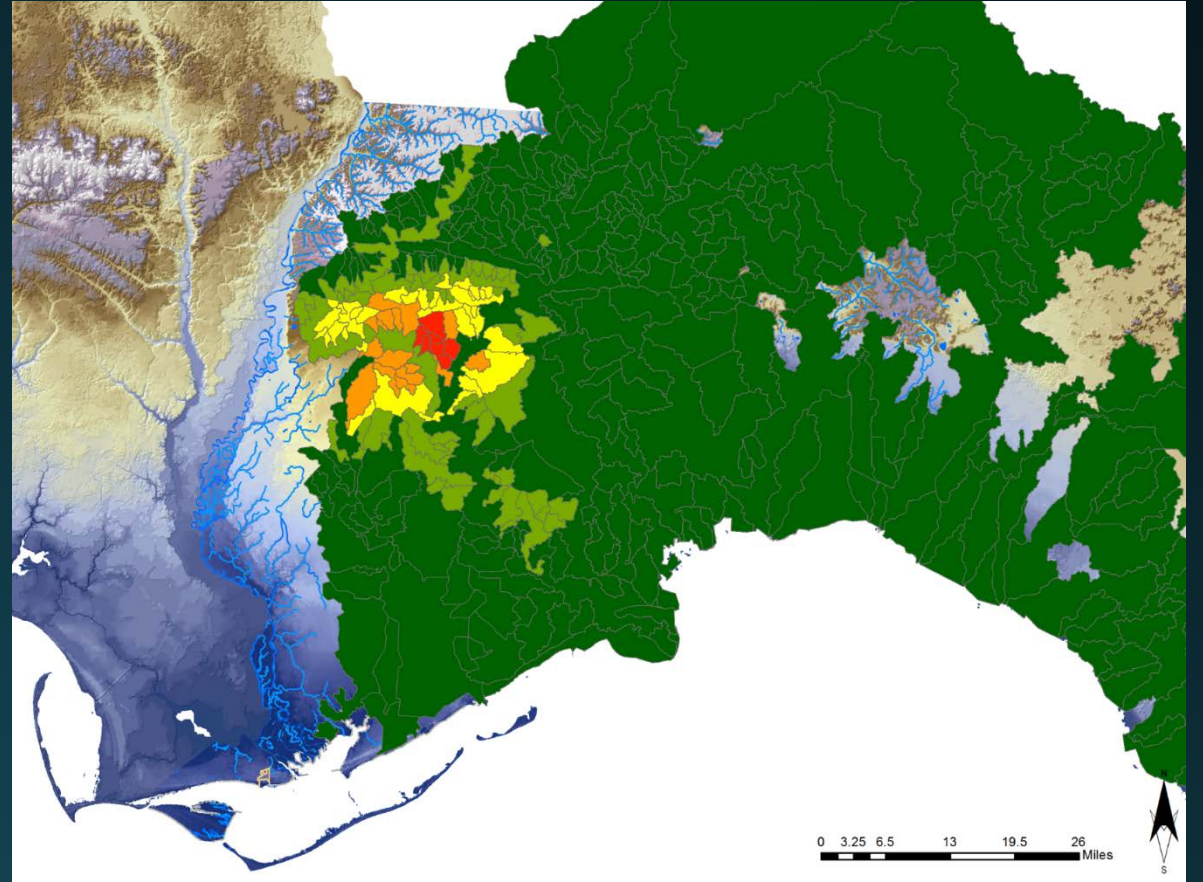

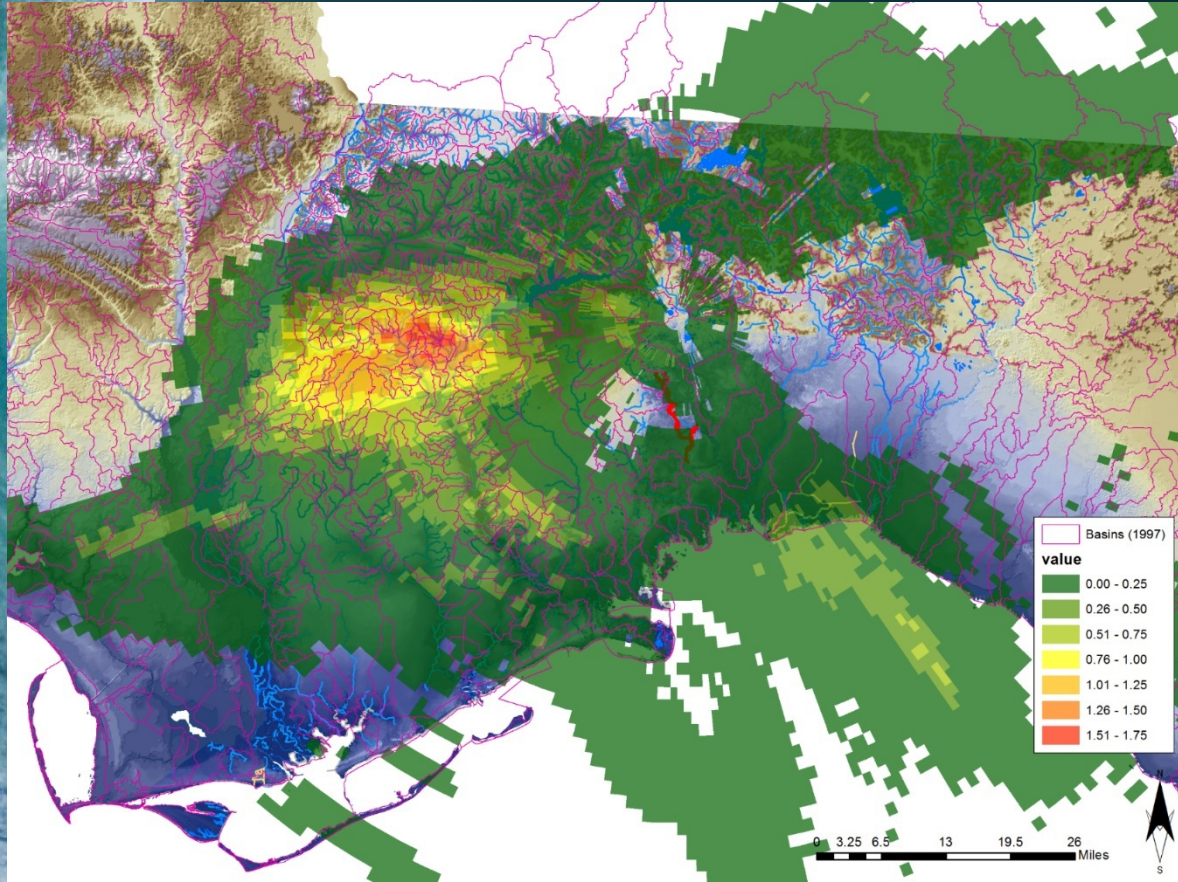

PostGIS: *Big Vector Analysis*

- Find invalid polygons
 - Copy to another table
 - Delete from analysis table
- Intersect with basins with NEXRAD polygons
- Calculate volume of rainfall using the area of each intersection polygon
- Aggregate rainfall sums by basin
- Repeat

Year	Dataset	Polygons	Invalid	Intersections	Basins	Processing Time (Hours)
2011	N1P	17,457,818	42,174	12,198,632	1,031,352	23.689
2013	N1P	28,331,000	68,136	20,726,278	1,771,745	42.559
2011	N3P	3,954,615	10,032	3,049,772	224,989	5.0005
2013	N3P	14,116,384	37,034	12,734,084	849,316	21.415

Benchmark Machine: Intel Core 2 Duo - 2.66 GHz, x86_64 w/ 4Gb RAM & Magnetic Disk HDD

scikit-image scikit-learn

"You can teach a computer to do that!?!?!"

scikit-image/scikit-learn

Image Processing, Segmentation, Detection

Difficulty: ★★★★★

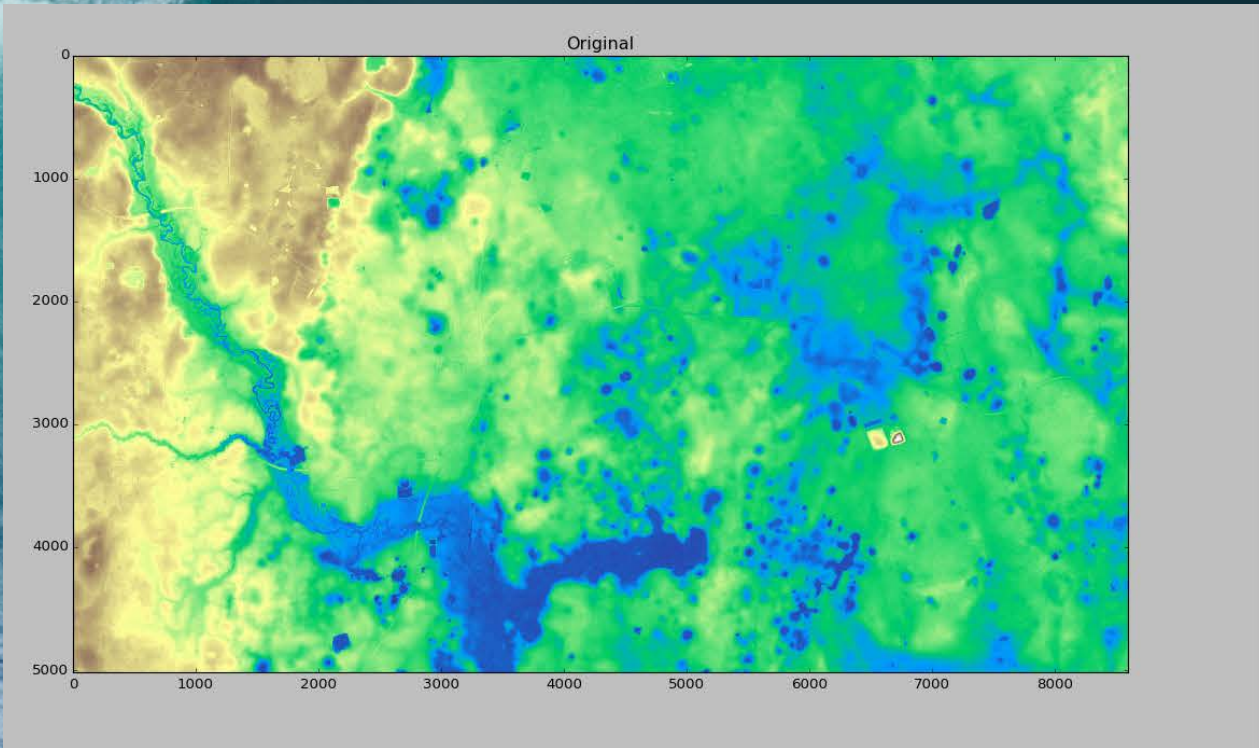

- The Good
 - “Bleeding edge” machine learning and [image processing algorithms](#)
 - Some algorithms will be familiar to people with raster experience
 - Easily integrates with Arcpy
 - Extremely powerful
 - Extremely fast
 - Excellent Documentation
- The Ugly
 - Requires a strong knowledge of and image processing
 - Experience with multi-threaded processing in python is needed for larger projects

scikit-image: *Sinkhole Mapping*

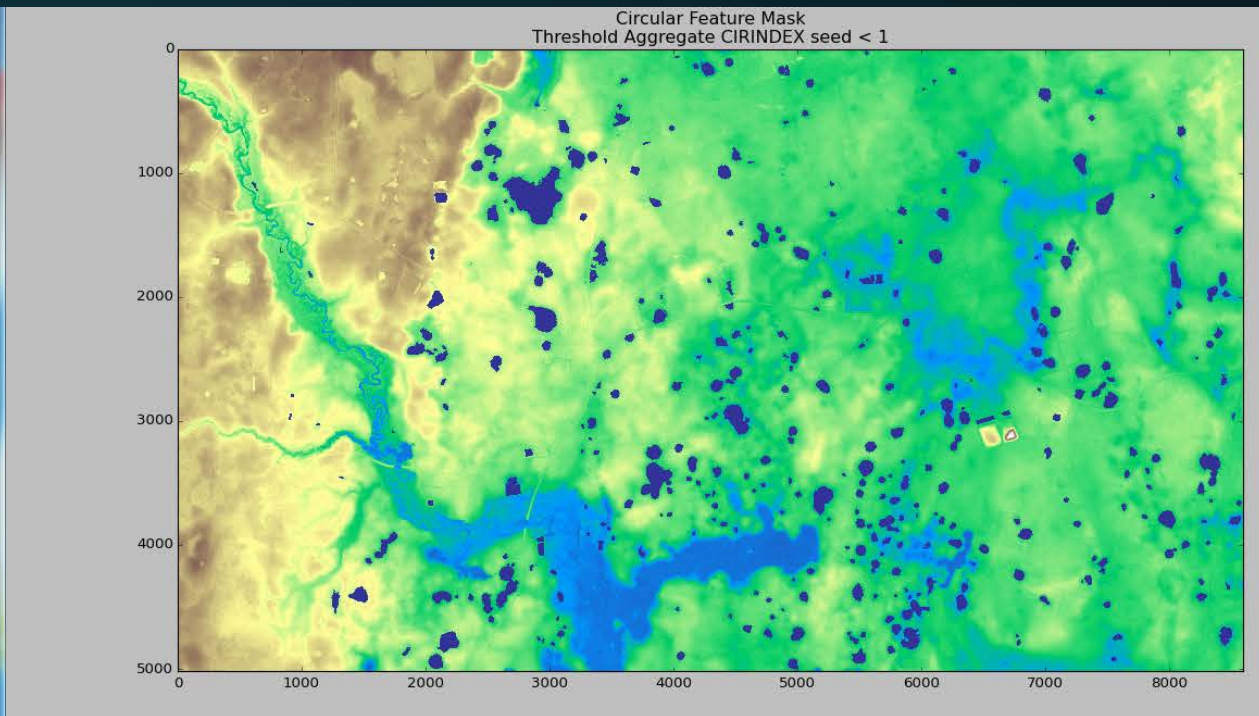

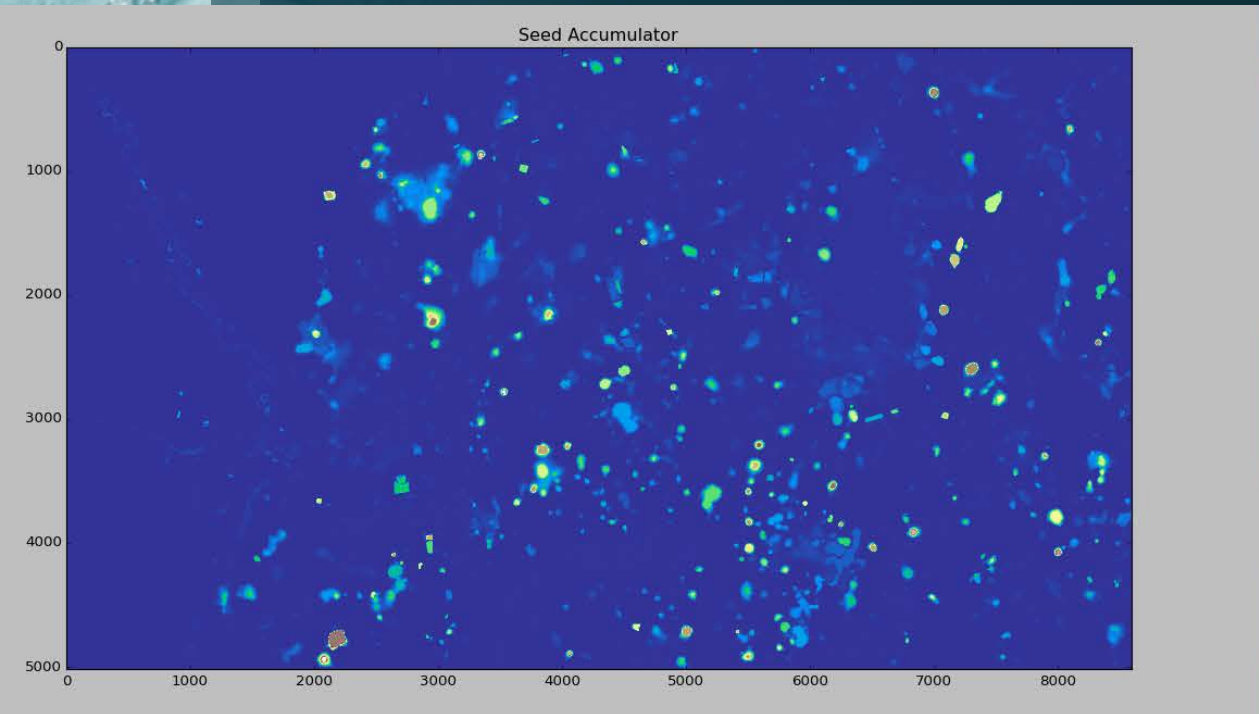

- Karst related features tend to be round, esp. cover collapse sinkholes
- Circularity metrics compare the ratio of area vs. perimeter as a measure of compactness
- A perfect circle has a circularity index = 1, a linear feature approaches 0.
- Vector method based on CTDs does not account for depth, nesting or density

scikit-image: *Additive Circularity Index and Sinkhole Mapping*

scikit-image: *Additive Circularity Index and Sinkhole Mapping*

MAXIMUM OVERDRIVE

and the sad ESRI post-script

geoserver

Web Geoservices

geoserver

Geospatial Web Server

Difficulty: ★★★★★

- The Good

- Directly integrates with PostGIS
- Serves out data directly to ArcGIS through WFS, WMS, etc.
- Data is downloadable as KML, SHP, and other formats
- Amazon Machine Images are available

- The Ugly

- Requires a strong familiarity with Linux in a production environment
- SLD styling is a horror show that will leave you with nightmares
- Backend software only
- Savvy web-development team needed to integrate into web apps

geoserver Geospatial Web Server

The screenshot displays the GeoServer web interface. At the top left is the GeoServer logo. At the top right, it shows the user is logged in as 'admin.' with a 'Logout' button. The main content area is titled 'Welcome' and contains the following information:

- Welcome**
This GeoServer belongs to Florida Geological Survey.
- System Metrics:**
 - 15 Layers (Add layers)
 - 6 Stores (Add stores)
 - 1 Workspaces (Create workspaces)
- Warning:** No strong cryptography available, installation of the unrestricted policy jar files is recommended.
- Version:** This GeoServer instance is running version 2.4.7. For more information please contact the administrator.
- Service Capabilities:**
 - WCS: 1.0.0, 1.1.0, 1.1.1, 1.1
 - WFS: 1.0.0, 1.1.0, 2.0.0
 - WMS: 1.1.1, 1.3.0
 - TMS: 1.0.0
 - WMS-C: 1.1.1
 - WMTS: 1.0.0

The left sidebar contains a navigation menu with the following sections:

- About & Status:** Server Status, GeoServer Logs, Contact Information, About GeoServer
- Data:** Layer Preview, Workspaces, Stores, Layers, Layer Groups, Styles
- Services:** WCS, WFS, WMS
- Settings:** Global, JAI, Coverage Access
- Tile Caching:** Tile Layers, Caching Defaults, Gridsets, Disk Quota
- Security:** Settings, Authentication, Passwords, Users, Groups, Roles, Data, Services
- Demos**
- Tools**
